INSTRUMENTATION

DEP 00.30.10.05-Gen.

February 1990
(DEP Circular 44/92 has been incorporated)

DESIGN AND ENGINEERING PRACTICE

USED BY
COMPANIES OF THE ROYAL DUTCH/SHELL GROUP

This document is confidential. Neither the whole nor any part of this document may be disclosed to any third party without the prior written consent of Shell Internationale Petroleum Maatschappij B.V., The Hague, the Netherlands. The copyright of this document is vested in Shell Internationale Petroleum Maatschappij B.V., The Hague, the Netherlands. All rights reserved. Neither the whole nor any part of this document may be reproduced, stored in any retrieval system or transmitted in any form or by any means (electronic, mechanical, reprographic, recording or otherwise) without the prior written consent of the copyright owner.

PREFACE

DEP (Design and Engineering Practice) publications reflect the views, at the time of publication, of:

Shell International Oil Products B.V. (SIOP)
and
Shell International Exploration and Production B.V. (SIEP)
and
Shell International Chemicals B.V. (SIC)
The Hague, The Netherlands,
and other Service Companies.

They are based on the experience acquired during their involvement with the design, construction, operation and maintenance of processing units and facilities, and they are supplemented with the experience of Group Operating companies. Where appropriate they are based on, or reference is made to, national and international standards and codes of practice.

The objective is to set the recommended standard for good design and engineering practice applied by Group companies operating an oil refinery, gas handling installation, chemical plant, oil and gas production facility, or any other such facility, and thereby to achieve maximum technical and economic benefit from standardization.

The information set forth in these publications is provided to users for their consideration and decision to implement. This is of particular importance where DEPs may not cover every requirement or diversity of condition at each locality. The system of DEPs is expected to be sufficiently flexible to allow individual operating companies to adapt the information set forth in DEPs to their own environment and requirements.

When Contractors or Manufacturers/Suppliers use DEPs they shall be solely responsible for the quality of work and the attainment of the required design and engineering standards. In particular, for those requirements not specifically covered, the Principal will expect them to follow those design and engineering practices which will achieve the same level of integrity as reflected in the DEPs. If in doubt, the Contractor or Manufacturer/Supplier shall, without detracting from his own responsibility, consult the Principal or its technical advisor.

The right to use DEPs is granted by SIOP, SIEP or SIC, in most cases under Service Agreements primarily with companies of the Royal Dutch/Shell Group and other companies receiving technical advice and services from SIOP, SIEP or SIC. Consequently, three categories of users of DEPs can be distinguished:

- 1) Operating companies having a Service Agreement with SIOP, SIEP, SIC or other Service Company. The use of DEPs by these Operating companies is subject in all respects to the terms and conditions of the relevant Service Agreement.
- 2) Other parties who are authorized to use DEPs subject to appropriate contractual arrangements.
- 3) Contractors/subcontractors and Manufacturers/Suppliers under a contract with users referred to under 1) or 2) which requires that tenders for projects, materials supplied or - generally - work performed on behalf of the said users comply with the relevant standards.

Subject to any particular terms and conditions as may be set forth in specific agreements with users, SIOP, SIEP and SIC disclaim any liability of whatsoever nature for any damage (including injury or death) suffered by any company or person whomsoever as a result of or in connection with the use, application or implementation of any DEP, combination of DEPs or any part thereof. The benefit of this disclaimer shall inure in all respects to SIOP, SIEP, SIC and/or any company affiliated to these companies that may issue DEPs or require the use of DEPs.

Without prejudice to any specific terms in respect of confidentiality under relevant contractual arrangements, DEPs shall not, without the prior written consent of SIOP and SIEP, be disclosed by users to any company or person whomsoever and the DEPs shall be used exclusively for the purpose for which they have been provided to the user. They shall be returned after use, including any copies which shall only be made by users with the express prior written consent of SIOP and SIEP. The copyright of DEPs vests in SIOP and SIEP. Users shall arrange for DEPs to be held in safe custody and SIOP or SIEP may at any time require information satisfactory to them in order to ascertain how users implement this requirement.

All administrative queries should be directed to the DEP Administrator in SIOP.

NOTE: In addition to DEP publications there are Standard Specifications and Draft DEPs for Development (DDD's). DDD's generally introduce new procedures or techniques that will probably need updating as further experience develops during their use. The above requirements for distribution and use of DEPs are also applicable to Standard Specifications and DDD's. Standard Specifications and DDD's will gradually be replaced by DEPs.

TABLE OF CONTENTS

INTRODUCTION.....	5
1. INSTRUMENTATION - GENERAL	6
Instrument engineering data sheet - DEP 05.00.51.84-Gen., 4/79	7
List of selected instrument - DEP 05.00.54.40-Gen., sheet 1 10/82	9
General purpose sheet (A4 size) - DEP 05.00.54.80-Gen., 9/75	29

INTRODUCTION

This publication is a compilation of "Instrumentation" standard forms.

For all other standard forms, refer to DEP 00.00.10.05-Gen.

For data sheets and data/requisition sheets, refer to DEP 30.10.01.10-Gen., "Requisitioning".

The forms are intended for use by Group companies and, where required, by their contractors and suppliers.

The applications of these forms is in general, described in the relevant DEP publication, but for ease of reference they have been collected in binders.

New and revised standard forms will be supplied as yellow "master" copies only. All instrumentation standard forms should be kept in this DEP binder and used for printing yellow or white working copies as required. It is recommended that "blank" working copies should also be made on yellow paper to identify them as masters, since on completion of the technical information they will be used to produce copies.

The contents of this binder have been sub-divided into the following groups of standard forms for the subjects listed:

1. Instrumentation - General
2. Flow calculations
3. Instrument installations

1. INSTRUMENTATION - GENERAL

Instrument engineering data sheet	DEP 05.00.51.84-Gen., 4/79
List of selected instrument equipment (20 sheets)	DEP 05.00.54.40-Gen., 10/82
General purpose sheet (A4 size)	DEP 05.00.54.80-Gen., 9/75
General purpose sheet (A3 size)	DEP 05.00.54.83-Gen., 9/79
Summary of instrumentation documents and drawings (3 sheets)	DEP 05.00.54.88-Gen., 9/79
Amended per Summary of instrumentation requisitions Circular 44/92 (2 sheets)	DEP 05.00.54.89-Gen., sheet 1, 4/85 sheet 2, 9/79
Summary of instrumentation cables (4 sheets)	DEP 05.00.54.90-Gen., 9/79

DEP 05.00.51.84 – Gen., 4/79

1) Includes restriction orifices (RO)

DEP 05.00.54.40 - Gen., sheet 2, 10/82

List of selected instrument equipment - DEP 05.00.54.40-Gen., sheet 3 10/82

3.1	GENERAL This document lists the makes and types of instruments, instrument systems, instrument accessories, computer equipment, computer peripherals and plant telecommunication equipment, which have been selected by the principal for use in the project indicated in the title blocks. All items of the list are henceforth referred to as instrument equipment.
3.2	CODES The letters used in the 'Code' column of the list shall have the following meanings:
3.2.1	Code 'C' The contractor is free to make a choice from the alternatives, if shown, on condition that: <ul style="list-style-type: none"> — only one type of instrument equipment shall be chosen for a given service for the whole project, including instrument equipment which forms part of equipment packages — multihousing panel instrument equipment shall all be of the same make and type — the contractor's choice shall be included in the tender.
3.2.2	Code 'CD' The same rules shall apply as for items with code 'C', but in addition the contractor shall submit in the tender details of differences in cost including freight, where applicable, between the chosen instrument equipment and the alternatives.
3.2.3	Code 'P' The contractor shall submit to the principal quotations received for the makes and types of the instrument equipment shown. Based on a comparison of quotations (bid evaluation) submitted by the contractor, the principal will then make a choice.
3.2.4	Code 'S' The principal will decide on the make and type of instrument equipment based on the following information which shall be submitted by the contractor as part of the tender: <ul style="list-style-type: none"> — technical details — detailed cost breakdown of the hardware ex factory — detailed cost breakdown of the software ex factory, if applicable — freight details — detailed cost breakdown for installation/commissioning work — available service facilities at destination.

List of selected instrument equipment - DEP 05.00.54.40-Gen., sheet 4 10/82

3.2.5	Code 'NA'	Items are not applicable for this project.	
3.3	DEVIATIONS	<p>Deviations from the list are not normally allowed.</p> <p>The contractor may, if considered necessary, submit a proposal for approval by the principal making amendments to the list.</p> <p>The proposal shall include:</p> <ul style="list-style-type: none"> — the technical reasons for the proposed change — the financial consequences of the proposed change. 	
3.4	DEFICIENCIES	<p>When during the preparation of the tender or in the engineering stage it appears that the list is not complete, the contractor shall inform the principal immediately in writing, giving details of the deficiency in the list.</p> <p>The principal will then change/amend the list as appropriate.</p>	
3.5	VALIDITY	<p>A list of which the latest revision is authorized by signature on the cover sheet dated more than 6 months previously, is not valid for tendering purposes. In such a case the contractor shall inform the principal immediately in writing.</p> <p>The principal will then submit an updated and valid list.</p>	
3.6	STATUS	<p>The list shall be treated as confidential and shall not be disclosed to any manufacturer or other third party.</p>	
3.7	MODIFICATION TO THE LIST BY THE PRINCIPAL	<p>During the project phase the principal reserves the right to make modifications of addition/ omission, etc., to the list, which shall be negotiable with the contractor.</p>

Input data sheet for flow computer program BBRI01-Q - DEP 32.32.10.81-Gen, Sheet 2 10/86

ABRIDGED INSTRUCTIONS AND CODES			
7	Fluid type	1 liquid 2 steam	3 hydrocarbon gas 4 other gas
8	Other alternative units for: flow rate : kg/h, m ³ /s; L/h; lb/d; Lt/d (long ton/day); b/d; USGPM; IGPM; scft/d; scft ³ (10 6 scft/d) pressure : MPa; psi; mmHg; inHg meter range : inWG; inHg; bar		
9	Element type:	0 programmed selection 1 square edge flange tappings 2 square edge corner tappings 3 square edge radius tappings 4 quarter circle 5 conical entrance corner tappings 6 rectangular Venturi 7 ISA 1932 nozzle 8 long radius nozzle 9 Venturi type A 10 Venturi type B 11 Venturi type C 12 restriction orifice	
11	Enter	0 0°C and 1.01325 bar abs. 1 15°C and 1.01325 bar abs. 2 60°C and 14.69594 psia 3 for volumetric flows under operating conditions NB: - only if a volumetric flow rate is entered (see 10); - enter 3, when relative density/molecular mass is entered (see 15, 17); - not to be entered for liquid/steam volumetric flow rates.	
12	If nothing is entered, system default is 10		
14	Enter	1 for density under operating condition; 2 for density under reference condition. NB: Reference condition of density shall be same as the reference condition for volumetric flow rates.	
16	Enter	1 for d1 = density relative to air at 0°C and 1.01325 bar abs., 2 for d2 = density relative to air at 0°C and 14.69594 psia.	
18	If nothing is entered, system default is 0%.		
19	Enter	1 when total density, wet+dry part, is entered (see 13/15/17); 2 when dry part of density is entered (see 13/15/17). NB: not for liquids and steam.	
20	Not for liquid.		
21	Enter when	density under reference conditions/relative density/molecular mass is entered.	
	NB:	not for liquid and steam.	
24	Not required for liquid.		
25	Not required.		
26/27	Not required when 28 will be entered.		
27	Preferred	P25, P40, P64, P100 (P25= DIN PN25 i.e. nominal pressure)	
	Alternative	S10, S20, S30, S40, S60, S80, S120, S160 (S10=schedule 10)	
28	Enter only when internal pipe diameter has been measured.		
31	If nothing entered system default is 0.07 mm.		
32	If nothing entered system default is 0.000011 mm/°C.		
34	Enter 0 when no bleed hole is required.		
36/37	Enter, for one-plane contraction, (H=h or W=w) the same value as under 29 or 30.		
38	If nothing entered system default is 0.000017 mm/°C.		
39	Need not be entered for a programmed selection of element (see 9).		
40	If nothing entered system default is 3:1		
N3	For entering density, see 13-19: Liquid : enter only density under operating condition (enter only 13); Steam : enter either density under operating conditions or absolute operating pressure (enter only 13+18+24 or 18+24); Gas : a) mass flows : - density under operating conditions (enter 13/14/18/19); : - relative density (enter 15/16/18/19); : - molecular mass (enter 17/18/19); b) volumetric flows : - density under reference conditions (enter 13/14/18/19/11); : - relative density (enter 15/16/18/19 and 11=3); : - molecular mass (enter 17/18/19 and 11=3).		
Preferred units are SI in accordance with the requirements of DEP 00.00.20.10-Gen.			

Sizing form for square edge orifices with flange tappings - DEP 32.32.11.45-Gen., sheet 1 03/86

SIZING FORM FOR SQUARE EDGE ORIFICES WITH FLANGE TAPPINGS			
Plant: _____		Tag No.: _____	
Service: _____			
DATA TO BE SUPPLIED BY OPERATIONS			
Approx. norm. quantity q_m _____ kg/s	Density ρ under operating cond. _____ kg/m ³		
Viscosity η under operating cond. _____ m Pa · s	Operating pressure p _____ bar		
Operating temp. T _____ °C	Water content in wet steam _____ % wt		
Orifice diameter d_m at T_0 _____ mm	Linear expansion coeff. α_{pipe} _____ /°C		
Internal pipe dia. D_m at T_0 _____ mm	Linear expansion coeff. α_{plate} _____ /°C		
Transmitter range DP _____ bar	Ambient temp. T_0 _____ °C		
Indication X of q_m on scale (0-10) _____	Limitations: $0.2 \leq \beta \leq 0.75$		
Bleed hole size y _____ mm	$1260 \beta^2 D \leq Re_D \leq 10^8$		
Ratio of specific heats $\kappa = C_p/C_v$ _____

FLOW FACTOR CALCULATION FORM FOR SQUARE EDGE ORIFICES WITH RADIUS TAPPINGS			
Plant: _____		Tag No.: _____	
Service: _____			
DATA TO BE SUPPLIED BY OPERATIONS			
Approx. norm. quantity q_m _____ kg/s	Density ρ under operating cond. _____ kg/m ³		
Viscosity η under operating cond. _____ m Pa · s	Operating pressure p _____ bar		
Operating temp. T _____ °C	Water content in wet steam _____ % wt		
Orifice diameter d_m at T_0 _____ mm	Linear expansion coeff. α_{pipe} _____ /°C		
Internal pipe dia. D_m at T_0 _____ mm	Linear expansion coeff. α_{plate} _____ /°C		
Transmitter range DP _____ bar	Ambient temp. T_0 _____ °C		
Indication X of q_m on scale (0-10) _____	Limitations: $0.2 \leq \beta \leq 0.75$		
Bleed hole size y _____ mm	$1260 \beta^2 D \leq Re_D \leq 10^8$		
Ratio of specific heats $\kappa = C_p/C_v$ _____			
1. $d = d_m [1 + 0.55 (y/d_m)^2] [1 + \alpha_{\text{plate}} (T - T_0)]$	$d =$ _____ mm		
2. $D = D_m [1 + \alpha_{\text{pipe}} (T - T_0)]$	$D =$ _____ mm		
3. $\beta = d/D$	$\beta =$ _____		
4. $F_s = 1 + 0.0074 W_t$ For gas and liquid $F_s = 1$	$F_s =$ _____		
5. $\epsilon = 1 - [0.41 + 0.35 \beta^4] \cdot [(DP)/p] \cdot [X/10]^2 \cdot \kappa^{-1}$ N.B.: if the fluid is a liquid $\epsilon = 1$	$\epsilon =$ _____		
6. $q_m = 2.107 \cdot 10^{-5} \frac{1}{\sqrt{1-\beta^4}} \epsilon X d^2 \sqrt{DP \rho}$	estimated $q_m =$ _____ kg/s		
7. $Re_D = \frac{1.2732 \cdot 10^6 q_m}{\eta D}$	$Re_D =$ _____		
8. $C = 0.5959 + 0.0312 \beta^{2.1} - 0.184 \beta^8 + 0.0029 \beta^{2.5} \left[\frac{10^6}{(Re_D)} \right]^{0.75} + 0.039 \beta^4 (1 - \beta^4)^{-1} - 0.015839 \beta^3$	$C =$ _____		
9. $q_m = 3.512407 \cdot 10^{-5} C \frac{1}{\sqrt{1-\beta^4}} \epsilon X d^2 F_s \sqrt{DP \rho}$	calculated $q_m =$ _____ kg/s		
Repeat 7 through 9 until calculated q_m agrees with previously calculated q_m to within 0.01%			
$X =$ _____			
Flow factor $q_m / X =$ _____ kg/s			
Calculated by: _____ Date: _____ Sign.: _____

3.1 GENERAL

This document lists item and MESC numbers of instrument installation materials, which have been selected by the principal.

3.2 DEVIATIONS

Deviations from this list require the written approval of the principal.

3.3 DEFICIENCIES

When during the engineering stage it appears that the list is not complete the contractor shall inform the principal immediately in writing, giving details of the deficiency in the list together with a proposal for approval by the principal.

3.4 STATUS

The list shall be treated as confidential and shall not be disclosed to any manufacturer or other third party.

3.5 MODIFICATION TO THE LIST BY THE PRINCIPAL

During the project phase, the principal reserves the right to make modifications to the list, which shall be negotiable with the contractor.

3.6 USE OF ITEM NUMBERS

The item numbers given in this list shall be indicated on instrument installation drawings as well as in the summary of instrument installation materials.

3.7 REQUISITIONING OF MATERIALS

Contractor shall verify the MESC- numbers as given in this list against the latest MESC sheets for correctness. In case of deviations the MESC sheets are overruling.
The contractor shall inform the principal in writing of these deviations.

3.8 CONTRACTOR

The contractor shall enter the materials actually applied for the project on Summary of Instrument Installation Materials - Specification. (Section 5).
The total amount of materials shall be filled-in on the list "quantities". (Section 6).

Cover sheet - DEP 32.37.02.81-Gen., sheet 1 7/92 (DEP Circular 44/92)

INSTRUMENT IMPULSE LINES (METRIC VERSION)

Section	Sheets	Subject
1	101	Cover sheet
2	201 – 299	Index of sheets
3	301 – 399	Index of instruments
4	401 –	Components
5	501 – 505	Mounting supports
6	601 – 699	Flow instruments
7	701 – 799	Level instruments
8	801 – 899	Pressure instruments
9	901 – 999	Miscellaneous instruments (Note 3)
10	1001 – 1099	Tracing of instruments
11	1101 – 1199	Thermal expansion Requirements for excessive movement of pipes
12	1201 – 1299	Requirements for vibrating pipes

Engineering notes

- Guidance on selection of the particular "hook-up" sheet for various services is given in DEP 32.37.10.11-Gen.
- For guidance during the preparation of the set of drawings for instrument impulse lines, the following pages show the general arrangement of the sheets, as well as a number of typical examples of drawings.
For further details, see DEP 32.37.10.11-Gen.
- When miscellaneous instruments (other than for flow, level, pressure, temperature) must be included, these shall be shown on sheets numbered sequentially from 901 up to 999, as needed.

Principal :							

Components - DEP 32.37.02.81-Gen., sheet 5 7/92 (DEP Circular 44/92)

[illegible]

DEP 32.37.02.81 - Gen., sheet 5, 7/92

Mounting supports - DEP 32.37.02.81-Gen., sheet 6 7/92 (DEP Circular 44/92)

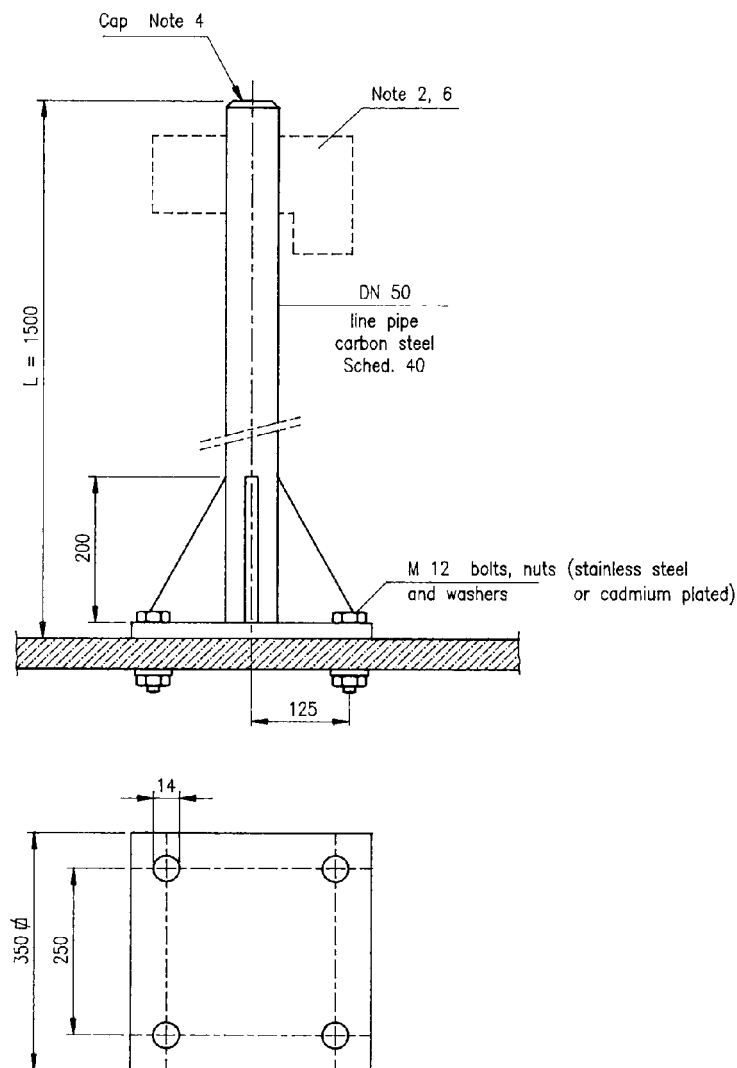

NOTES:

- 1) Plates and strips carbon steel 10 mm thick.
- 2) For dimensions of mounting plate, see S-37813 or S-37814.
- 3) Finish: after shotblasting a preserving agent shall be applied as per requisition.
- 4) Cap material: ☐ plastic or ☐ carbon steel
- 5) Dimensions in millimetres.
- 6) Mounting plates are supplied separately and shall be fixed to the support at the construction site.

TYPE S4
STRAIGHT SUPPORT FOR LINE MOUNTING
(RESTRICTED USE, SEE DEP 32.37.10.11 - Gen.)

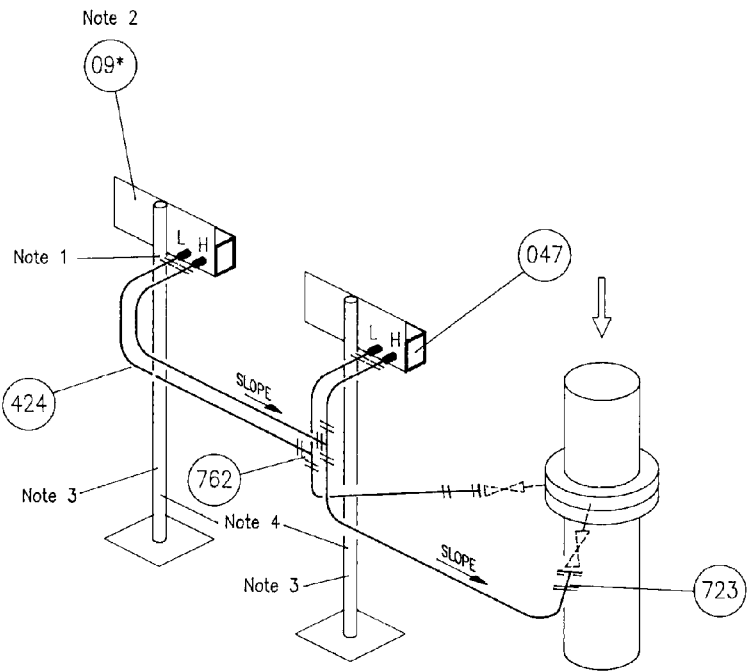

NOTES:

- 1) For dimensions of mounting plate, see S-37.813 or S-37.814.
- 2) Material of clamps : carbon steel
Cap : ☐ plastic or ☐ carbon steel
Line pipe : carbon steel
Bolts and nuts : unified black hexagon, heavy series.
- 3) Finish : after shotblasting a preserving agent shall be applied as per requisition.
- 4) Mounting plates are supplied separately and shall be fixed to the support at the construction site.

Flow instruments - DEP 32.37.02.81-Gen., sheet 22 7/92 (DEP Circular 44/92)

<p>Diagram showing a liquid flow remote mounting system for two transmitters. The system includes a main vertical pipe, two horizontal branches, and a manifold. Transmitters (047) are connected to the branches, and control/emergency lines (09*) are connected to the manifold (424). The manifold is connected to a larger pipe (723). Arrows indicate 'Slope' and 'UPWARD FLOW ONLY'. Notes 1-4 are present.</p>					Tag No.

Engineering notes

- Guidance on selection of the particular "hook-up" sheet for various services is given in DEP 32.37.10.11-Gen.
- For guidance during the preparation of the set of drawings for instrument impulse lines, the following pages show the general arrangement of the sheets, as well as a number of typical examples of drawings.
For further details, see DEP 32.37.10.11-Gen.
- When miscellaneous instruments (other than for flow, level, pressure, temperature) must be included, these shall be shown on sheets numbered sequentially from 901 up to 999, as needed.

TYPE S4
STRAIGHT SUPPORT FOR LINE MOUNTING
(RESTRICTED USE, SEE DEP 32.37.10.11 - Gen.)

NOTES:

- 1) For dimensions of mounting plate, see S-37.813 or S-37.814.
- 2) Material of clamps : carbon steel
Cap : ☐ plastic or ☐ carbon steel
Line pipe : carbon steel
Bolts and nuts : unified black hexagon, heavy series.
- 3) Finish : after shotblasting a preserving agent shall be applied as per requisition.
- 4) Mounting plates are supplied separately and shall be fixed to the support at the construction site.

DEP 32.37.02.83 - Gen., sheet 4, 12/89

Installation notes - DEP 32.37.02.83-Gen., sheet 5 12/89

INSTALLATION NOTES

Before and during the actual installation of the instruments and their impulse lines, the following points shall be observed.

LOCATION

The attached drawings show in general the required position of the instrument relative to the measuring point. The exact location shall be determined at site; the responsible instrument supervisor shall mark this location on the process equipment, plant structures, etc..

All indicating instruments shall be installed with the instrument centre approximately 1.3 m above floor level and shall be visible from the corresponding controlling element, where applicable.

All instruments shall be installed in such a way that they are not subject to excessive vibration and/or extreme environmental conditions, and do not obstruct traffic. Instruments shall not be located under places with potential leakage.

Sufficient space shall be left around the instrument for removing the protective shades. The minimum clearance between any part of the instrument mounting system and surrounding structures or equipment shall not be less than 0.3 m.

INSTRUMENT SUPPORTS

When specified in Section 3, each instrument shall be provided with a support as detailed in Section 6.

Subject to approval by principal's instrument engineer, more than one mounting plate may be attached to one instrument support instead of separate supports as shown on the relevant drawing.

Supports at grade or on concrete floors shall have concrete footings and/or grouting.

Support on process pipes shall not cause electrolytic corrosion. Therefore an insulation layer shall be provided on all piping in materials other than carbon steel, e.g. in the form of a strip of non-metallic gasket.

TUBING AND COMPRESSION FITTINGS

The tubing shall be cut dead square with a tube cutter; the edges shall be deburred. The tube end shall be undamaged, round and without scratches over the length which fits into the compression fitting. Any coating or painting shall be removed.

Tubes shall be bent with a high-quality tube bender which shall have a minimum bending radius as specified by the tubing manufacturer.

Made by :	Date :	Title : INSTRUMENT AIR LINES	Issue				
Checked by :	Date :		Date

Principal :		Drawing No. T					

DEP 32.37.02.83 - Gen., sheet 5, 12/89

Installation notes - DEP 32.37.02.83-Gen., sheet 6 12/89

Long lengths of tubing shall be supported over the full length and fixed to the support at intervals of approximately 1m.

Where final control elements may change position relative to the instrument, e.g. due to thermal expansion the air lines shall be so arranged that undue stresses on the compression fittings are prevented.

When tightening compression fittings, manufacturer's instructions shall be carefully adhered to.

THREAD SEALANT

NPT threaded connections require PTFE tape (MESC 85.15.78.038.1) to prevent seizing and leakage.

The tape shall be applied as follows :

Place tape on male thread, leaving two threads at the small end free from tape, hold in place and wrap clockwise only once with a slight overlap. Draw tightly around threads so that it conforms to the threaded surface.

PRESSURE TESTING, etc.

For procedures of pressure testing, applying seal liquid, commissioning, etc., see DEP 62.37.10.12 - Gen.

Note: Instrument air supply and pneumatic signal lines shall only be pressure tested with compressed air.

CODES FOR PROTECTION FACILITIES

The codes as specified in section 3 are:

P = protective shade.
